What I Learned

- **Full-stack integration is Hard:** Building frontend, backend, database, and AI features in a way that they connect cleanly together
- **Deployment:** configuration, hosting, environment setup, and how to debug when it inevitably goes wrong
- **AI integration in Practice:** how to use AI as a tool in the application, not just for development
- **Documentation and AI-Assisted Development:** quick development makes clear documentation essential for keeping the project understandable, maintainable, and aligned
